

Training Services

Petrofac Training, in conjunction with MSTC, provides following Survival courses for offshore personnel:

Basic Offshore Safety Induction and Emergency Training (BOSIET)

This course is designed to provide delegates with a basic knowledge of safety and emergency response procedures. It is the best choice for new entrants to the industry who have never undertaken survival training before.

Tropical Basic Offshore Safety Induction and Emergency Training (T-BOSIET)

This course covers the same principles of safety and emergency response training the BOSIET does, with specific training for personnel working in warm waters or tropical environments.

Further Offshore Emergency Training (FOET)

This course can be undertaken by individuals who have an in-date valid BOSIET certificate, to extend its validity.

Escape Systems Training

This course teaches the delegate to practically adopt the correct technique needed to descend from an escape chute system typically used in European Offshore Oil and Gas operating waters. This course is not specifically endorsed by any operating region. It is the responsibility of the delegate to ensure that this course will be accepted by the owner/operator of the asset on which they will be contracted.

Our survival courses are Offshore Petroleum Industry Training Organization (OPITO) certified

Survival training is essential for all individuals wishing to travel offshore providing them with a range of important survival tools.

At Petrofac Training quality and safety are at the forefront of everything that we do, and our experienced instructors provide realistic and challenging training in a carefully controlled environment.
